### **DETAILED ACTION**

In response to the communications dated 05/07/03 through 08/07/03, claims 1-8 are pending in this application.

#### ***Response to Arguments***

Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Anderson (US6282218).

With respect to claims 1-2 and 4-5, Anderson shows in Fig. 1B lithographic exposures, utilizing a line narrowed gas discharge laser 12 (col.3, l.6-8), comprising of a control computer 56 (col.9, l.51-53) to determine a desired laser spectrum and a fast responding tuning mechanism 76 (col.8, l.44-65).

With respect to claim 3, Anderson discloses the repetition rate of approximately 1000 pulses per second (col.4, l.5-7).

With respect to claims 6-8, it is inherent that the desired laser spectrum could have two or more separate peaks with the peak separation by at least 0.5 picometer based on the adjustments of the computer program lithographic parameters by the operators.

#### **Citation of The Pertinent References**

The following US patents are being made of record, even though they were not relied upon in this Office action, for being similar in subject matter, and may be relied upon in any future Office Actions: 5867514 and 5440578.
